

Client comparative benchmarks right at your fingertips

It's all in the details

Solventum™ Performance Data Monitoring (PDM) allows access to a series of dynamic dashboards and drill-down reports that enable you to assess performance at the facility, service line, physician, diagnosis related group (DRG) and case/patient level. Solventum PDM lets you readily export content for communication within your organization. This data can facilitate productive clinical documentation integrity (CDI) team collaboration, provide more comprehensive reviews with leadership by identifying specific cases that have opportunity for improvement, and drive better physician engagement.

"It's fun to see a more focused view. We've always had questions about HCUP and MEDPAR because they are so old."

-CDI corporate director

Solventum PDM: Client comparative benchmarks (CCBs)

It has become more critical than ever to measure the success, validate focused areas for improvement and show the value of your organization's CDI initiatives. Traditionally, performance data monitoring utilized comparative benchmarks developed by Solventum using publicly available data sources like MedPAR and HCUP that look across all health systems systems, which them more generic. By using client data through Solventum PDM, we can now provide more targeted and accurate benchmarks for our clients to compare themselves against similar or competing organizations. This can help identify and make more impactful improvements.

"This is great, validates our missing opportunities."

-CDI vice president

CCB for standard payer groups:

- All payer
- Commercial
- Medicaid
- Medicare
- Medicare Advantage

CCBs are available in the following peer groups:

Standard*

Major academic facilities

Major academic trauma level 1

Pediatric population

Neonatal population

Specialty cancer hospitals

*Facilities by region (Northeast, Midwest, South and West)/Facilities by bed size (small, medium, large)

CCB is now available for Solventum™ Performance Advisory Services customers in Solventum PDM, please work with your performance advisors to select the most relevant benchmark for your organization. Updates will be released on an annual basis.
